Device Management

Device Management™ is a manufacturer-neutral platform that integrates industry-leading audiovisual control software experience with world-class IoT technologies.

Key Benefits

Single pane of glass
Consolidate an array of manufacturer-specific device management applications by managing configuration and reporting of network-enabled devices with one tool.

Easy to secure, simple to deploy
Eliminate the risks of connecting devices directly to the internet and avoid custom in-room control software and hardware. Device Management is designed to work with your preferred solutions without additional requirements.

Beyond basic status
Have confidence that not only are devices online and communicating, but are also safe, secure, and meet your policy standards.

Faster, more efficient audiovisual installations

Provide integration teams live device information and automatic device commissioning during system installation.

## Prevent policy drift with audit reporting

Understand how, when, and why device configuration settings change, enabling consistent long-term device hardening.

Manage and update remote devices

Safe and secure device updates from anywhere, enabling the fastest, lowest-cost response for effective issue resolution.

How it Works

PepperDash Device Management is enabled through the installation of the PepperDash Edge application server. Enabling Device Management on the PepperDash Edge application server creates a secure communication pathway between PepperDash Portal and supported network-enabled devices. By consolidating network communication, IT teams can secure and closely monitor the communication pathway without requiring direct internet access to devices.
